John P. Hill

W. 438.

3rd ed.

T H E

W. 438.

Logick Primer.

Some Logical Notions to initiate
the INDIANS in the know-
ledge of the Rule of Reason;
and to show how to make
use thereof.

Especially for the Instruction of
such as are Teachers
among them.

Composed by J. E. for the
use of the *Praying Indians*.

The use of this Iron Key is to
open the rich Treasury of
the holy Scriptures.

Prov. 1.4 To give subtilty to the
simple; to the young man know-
ledge and discretion.

Printed by J. W. 1672.

These few short Logickall
Discourses are onely for a
Thrice, to lead my Readers to
them, and to guide them to fol-
low me through the principal
and most usefull Principles,
whereby they may be in some
measure enabled to understand,
open, and improve the plain
things of the Kingdome of
Christ Jesus revealed in the
Scriptures. And touching these
Discourses I may say as the Eunuch

said to Philip, *Acts 8.31*. How
can I understand them, unless
some man should guide me?
Lord Jesus help me to help
them, that they may come to the
knowledge of thy Truth. What
I have done is weak. To form
Words of Art, is a work that
requireth time and judgement.
I have adventured to break
the ice; Lord raise more able
Workmen to follow, and to
mend both the Foundation and
Building.

the 1990s, the number of people in the world who are under 15 years of age has increased from 1.1 billion to 1.5 billion, and the number of people aged 65 and over has increased from 0.5 billion to 0.7 billion (United Nations, 1999).

There are a number of reasons why the world population is growing so rapidly. One of the main reasons is that the number of children born to each woman has increased. This is due to a number of factors, including improved medical care, increased access to contraception, and a shift in cultural values.

Another reason why the world population is growing so rapidly is that the number of people who are surviving into old age has increased. This is due to a number of factors, including improved medical care, increased access to health care, and a shift in cultural values.

The rapid growth of the world population has a number of implications for the future. One of the main implications is that there will be a need for more resources to support the growing population. This includes food, water, and energy.

Another implication is that there will be a need for more jobs to support the growing population. This is because the number of people who are entering the workforce is increasing, while the number of people who are leaving the workforce is decreasing.

The rapid growth of the world population is a major challenge for the future. It is important that we take action now to address the challenges that it presents. This includes increasing access to education, improving medical care, and promoting sustainable development.

There are a number of ways in which we can address the challenges that the rapid growth of the world population presents. One way is to increase access to education. This will help to ensure that all children have the opportunity to learn and to develop their skills.

Another way is to improve medical care. This will help to ensure that all people have access to the care that they need to stay healthy and to live long lives.

A third way is to promote sustainable development. This will help to ensure that we are using resources in a way that is sustainable for the future. This includes using renewable energy sources, conserving water, and protecting the environment.
